

Connecting to NoMachine

1. To use this you must first either be connected via the [webvpn](#) or connected directly to the SCHARP network.

2. If you have not yet downloaded and installed the NoMachine client please do so by following the directions below. Go to <http://www.nomachine.com/download.php> and scroll down to '**NX Client Products**'

- Select the NX Client for Linux
- Download and RPM or DEB package, depending on your distribution. If your distribution doesn't use either, download the Compressed Tar file, and build from source per the installation instructions on the page.
- Please note: You will need root or full sudo privileges as root to complete this installation from source, rpm or deb.

3. Now that your NX client is fully installed, open your web browser and go to <http://admin-c.scharp.org/nxbuilder/ClientDownload.php>

Use the Drop down box marked as Display to choose the screen resolution you would like to work in.

Click on the linux icon under the Desktop heading.

Type in your CenterNet username and password and click Login
